REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The cited prior art and art otherwise known to the examiner does not teach or suggest a radiation curable polymer represented by the structural formula I set forth in the instant claim 1 wherein the end group(s) is/are heterocyclic and double bond containing groups as shown in formula I in combination with a cationic photoinitiator. The closest prior art is discussed herein below.

Hadjikyriacou and Faust, in the article "Cationic Macromolecular Design and Synthesis Using Furan Derivatives" discloses polyisobutylene polymers having furan end groups but do not suggest compositions comprising a cationic photoinitiator. The method disclosed differs from the method set forth in claim 12 because the disclosed end-capping monomer does not contain an R^3 group containing Sn or Si. The article teaches end capping polyisobutylene with 2-alkylfurans.

Faust et al (6,469,115) disclose telechelic silyl-functional polyisobutylene and methods for preparation.

Bahadur et al (6,069,185) disclose radiation curable compositions comprising alkenyl ether functional polyisobutylenes. Heterocyclic end capping monomers of the instantly claimed formula are not suggested.

Michot et al (6,492,449) disclose polymers obtained by sequential polymerization in the presence of an anionic initiator and bearing functions that can be activated by cationic initiation. However, the cationically polymerizable end groups, such as epoxy, styryl, dioxolane or oxazoline, do not correspond to instantly claimed formula I.

Cherdame et al (5,444,135) disclose living cationic polymerization of nitrogen-containing polymers, such as polyisobutylene, wherein the end groups are azido, cyano, carbonylamino, etc.
